

Abhinav Gundrala

(360)-867-3192

abhinav.gundrala@outlook.com

Summary

Technology enthusiast with experience in software development and embedded systems. Skills include application development, algorithmic literacy and machine learning fundamentals. Some experience working with electronics and circuit design. Very willing to learn new concepts and collaborate!

Education

University of California, Berkeley

BS Computer Science

Berkeley, California

Enrolled August 2019

Current student at UC Berkeley pursuing major in Computer Science or Cognitive Science.

- **Clubs:** Neurotech@Berkeley, Open Computing Facility (Staff Operator)
- **Relevant Coursework:**
 - CS 61A: Structure and Interpretation of Computer Programs
 - EECS16A: Designing Information Devices and Systems

Professional Skills

Programming Languages

- Python: Advanced
- Java: Advanced
- SQL: Advanced
- C : Intermediate
- Scheme: Intermediate
- Bash: Intermediate
- Javascript: Intermediate

Platforms and Tools

- Android, Linux, Windows
- React Native, Django and Flask, NodeJs, Angular
- Git, MS Visual Studio

Employment History

Microsoft

Software Development Intern

Redmond, Washington

June 2018 - August 2018

Developed mobile applications with a team of other software development interns to showcase Microsoft computer vision skills. Cumulative project developed during the internship was an Android App that used OCR technology to read menus and display vital info. Cultivated abilities in teamwork and communication.

The OCF provides students on campus access to computers and computational environments to run personal projects. As staff, we help develop new bash scripts, web applications and configuration scripts to simplify student access to computational resources. Work exclusively with open source technologies like Linux.

Generation YES

Web Developer

Olympia, Washington
September 2016 - March 2017

Worked on the GenYES Program Website helping students connect with teachers needing technology help. Worked with Phoenix Framework implementing HTML, CSS and Java Script code. Also helped maintain SQL databases and write SQL queries for MVC type web development.

Projects

Myocardial Infarct Detection System https://github.com/gundralaa/heart_attack_detection

An end to end system for detecting and alerting users of silent heart attack events. Utilizes machine learning algorithms, basic signal filtering (FFT) and other signal processing algorithms written in Python. Uses custom ECG circuitry and micro controllers to collect bio signals for analysis.

FRC Pi Vision <https://github.com/gundralaa/PiVision>

Custom camera analysis server utilizing an on board Raspberry Pi to help an FRC robot navigate in a competition match setting. Uses the OpenCV Java library to accurately detect different objects within an environment, draw bounding boxes and return navigation information to the robot main controller.

VoicedIn <https://github.com/gundralaa/VoicedIn>

Android application developed during Microsoft Corporate Hackathon. Helped build an Android app that calls multiple APIs from microsoft cognitive services to connect users on LinkedIn through voice recognition and speech transcription. Written using Java and Android App development frameworks.

Dora <https://github.com/gundralaa/dora>

React native application developed for Cal Hacks 2019 that uses the Eluvio decentralized video streaming SDK to serve interactive video content to users. Uses facial sentiment detection ml models and other biomarkers to change video outcomes during streaming. Written in Javascript.

Awards

- International Science and Engineering Fair Winner (2017, 2018, 2019)
- Washington State Science Fair Silver Medal (2017)
- PLU Programming Competition Winner (2017)
